

Yongqi is a Research Professor/Principal Scientist and Division Director at Institute of Forestry, Chinese Academy of Forestry. He is the Program manager of "The National Forest Genetic Resources Platform". Project leader of the state priority research project "Key Techniques for Conservation and Sustainable Utilization". Responsible for project preparation, proposal development, project implementation and management; providing leadership in studies of forest genetic resources and biodiversity conservation; supervision of research students working on genetic conservation projects leading to MSc and PhD degrees. Provide technical advices and policy recommendations to the national and local forestry authorities for conservation and sustainable use of forest genetic resources.
